

**Pathways Involved in Amylin's Anorectic Action:
from Intracellular Signaling to Neuronal Networks**

Dissertation

zur

Erlangung der naturwissenschaftlichen Doktorwürde
(Dr. Sc. Nat.)

vorgelegt der

Mathematisch-naturwissenschaftlichen Fakultät
der
Universität Zürich

von

Catarina Alexandra Soares Potes

aus Portugal

Promotionskomitee

Prof. Dr. Max Gassmann (Vorsitz)
Prof. Dr. Thomas A. Lutz (Leitung der Dissertation)
PD Dr. Thomas Riediger (fachlicher Betreuer)
Prof. Dr. Carsten A. Wagner
Prof. Dr. Hans-Ruedi Berthoud

Zürich, 2010

Table of Contents

Summary	5
Zusammenfassung	7
 Introduction	
1. Control of body weight and food intake	10
1.1. Homeostatic vs. non-homeostatic regulation	10
1.2. Imbalance in the system	12
1.2.1. Obesity vs. Anorexia	12
1.2.2. Epidemiological data	14
1.3. Brain areas involved in the homeostatic control of eating	16
1.3.1. Brainstem areas	17
1.3.2. Hypothalamic areas	20
1.4. Peptides controlling eating	25
1.4.1. Adiposity signals	25
1.4.2. Ghrelin	27
1.4.3. Satiating signals	28
1.5. Model of energy homeostasis regulation	32
2. Amylin	34
2.1. General facts	34
2.1.1. Synthesis, secretion and clearance	34
2.1.2. Receptors and binding sites	35
2.1.3. Functions and sites of action	36
2.1.3.1. Actions involved in glucose homeostasis	36
2.1.3.2. Energy expenditure	36
2.1.3.3. Adiposity	37
2.2. Amylin's effects on eating	38
2.2.1. Central site of action	39
2.2.2. Characteristics of neurons mediating amylin signaling	41
2.2.2.1. Sensitivity to nutrients	41
2.2.2.2. Intracellular signaling molecules	42
2.2.2.3. Neurotransmitters involved in amylin signaling	43

2.2.3. Neuronal pathways involved in amylin signaling	44
2.2.4. Amylin interactions with other hormones regulating eating	45
Aims of the Study	
Aim 1: Identification of neuronal connections from amylin-activated areas to the rostral-dorsal LHA	50
Aim 2: Involvement of brainstem noradrenergic neurons in amylin's anorectic effect	51
Aim 3: Investigation of amylin-induced activation of the ERK pathway and implication in amylin's anorectic action	52
Paper 1 - Identification of central projections from amylin-activated neurons to the lateral hypothalamus	55
Paper 2 - Noradrenergic neurons of the area postrema mediate amylin's anorexigenic action	77
Paper 3 - The ERK 1/2 cascade is activated in structures of the AP/NTS-LPB-Ce-BSTL axis in response to amylin	89
Conclusions and Perspectives	
1- The neuronal pathways mediating amylin signaling	116
2- The neurochemical nature of AP neurons mediating amylin induced anorexia	119
3- Intracellular signaling cascades activated by amylin	121
4- Proposed mechanisms mediating amylin signaling in the central nervous system	123
5- Perspectives and open questions	125
